

My Duckling Diary.

Name:

Word Bank

Incubator: apparatus used to hatch eggs by creating the correct environment.

Duckling: a baby duck.

Crack: to open an egg by breaking the shell.

Embryo: unborn/ unhatched offspring in the process of development.

Egg: an oval object laid by a female bird containing an embryo.

Hatch: the opening of an egg to produce offspring.

Membrane: a thin layer of cells inside the egg.

Question-aids

Scientists ask questions all the time! They write lots of questions, decide on the most important ones and then go in search of the answers.

The circles might help you think of questions.

A large circle with five horizontal lines for writing.A large circle with five horizontal lines for writing.

Questions I'd like to answer about the ducklings.

*How many
Where What ?*

*Why When
Which Who*

Observation 1:

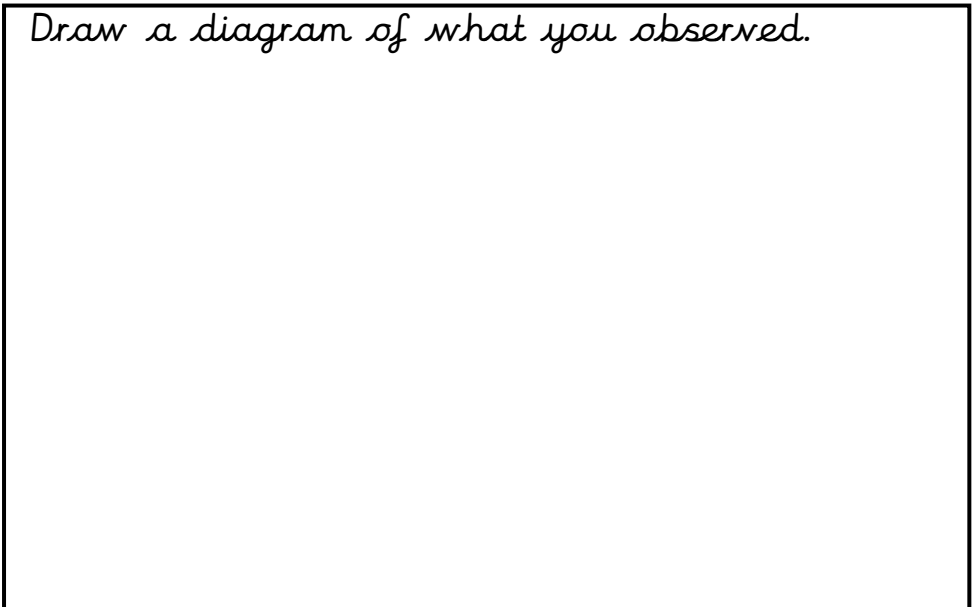

Record what you can see. Can you answer any of your questions about the ducklings yet?

Draw a diagram of what you observed.

Observation 2:

Record what you can see. Can you answer any of your questions about the ducklings yet?

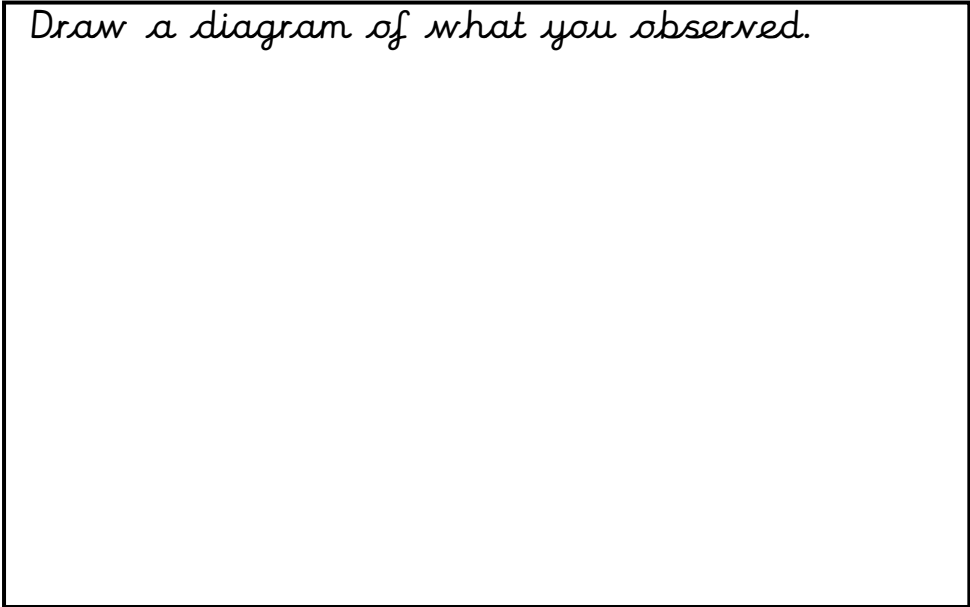

Draw a diagram of what you observed.

Observation 3:

Record what you can see. Can you answer any of your questions about the ducklings yet?

Draw a diagram of what you observed.

Observation 4:

Record what you can see. Can you answer any of your questions about the ducklings yet?

Draw a diagram of what you observed.

Observation 5:

Record what you can see. Can you answer any of your questions about the ducklings yet?

Draw a diagram of what you observed.

Conclusions:

How many eggs hatched?

What do ducklings need to grow and survive?

Record any other findings you found interesting.

Draw your favourite part of our inquiry?
